

CA_CLETS — CAD Auto-Dispatch Reference

Shows which queries fire automatically when CAD sends incident data vs those requiring officer input. **Blue** = CAD provides. *Italic* = defaulted. Green = officer can add. **Red** = officer must enter (blocks CAD auto-trigger).

Integration Insights

- ⇒ **Name queries fire across multiple entities.** CAD sends nameFirst/nameLast for: Vehicle, Person, Firearm, Article, Boat. A subject name on a CAD incident auto-triggers queries on all these entities simultaneously.
- ⇒ **Article: always officer-initiated.** CAD does not provide the required fields: `ArticleSerialNumber`, `ownerAppliedNumber`. These may use form-specific naming (e.g. DH-suffix fieldIds) or represent data not part of standard CAD dispatch events.
- ⇒ **ArticleSerialNumber not in CAD field list** for entity: Article. Combos requiring this field will never auto-trigger from CAD.
- ⇒ **criminalIdNumber not in CAD field list** for entity: Person. Combos requiring this field will never auto-trigger from CAD.
- ⇒ **ownerAppliedNumber not in CAD field list** for entity: Article, Boat. Combos requiring this field will never auto-trigger from CAD.
