

ConnectCIC™ Transaction Workflow Engine (TWE)

Install & Configuration Checklist for Illinois (LEADS)

#	Task	Status
1.	<u>ConnectCIC Software Configuration Requirements.</u> This <u>install-specific</u> information must be obtained by the site from the <i>Illinois</i> CJIS organization (LEADS) and is necessary to configure ConnectCIC's connectivity to the LEADS message switch. This following information is configured in the "State Settings" section of ConnectCICConfig.exe Tool: ✓ <u>IP Address and Port Number.</u> This is the IP Address or Hostname and Port for the site to connect to the message switch and is inputted in the <u>State Host Address</u> and <u>State Port</u> fields. ✓ <u>Connection Name.</u> This name defines the specific connection to LEADS 2000 and is provided to a site by LEADS. The name is used by LEADS to identify the connection and must be identical on both ends of the connection so the site must use what LEADS requires. This name should be configured in the <u>ConnectionName</u> field found in the "Other State Settings" drop down list. ✓ <u>CDC Name.</u> This is a value assigned by the State for an agency. If only one agency is using LEADS through this site, this CDCName can be configured in the CDCName field found in the "Other State Settings" drop down list. If more than one agency is using this LEADS connection, this field (maximum 11 characters) must be provided by the vendor (either sent in the <Authentication>/<CDCName> or configured in the device alias table). ConnectCIC must have this information to include in each message transaction sent to LEADS.	
2.	<u>Vendor Interface Requirements.</u> The following are the LEADS required fields that a vendor must submit to ConnectCIC TWE in every API request transaction: ✓ <u>Mnemonic</u> – The application assigned mnemonic for a device should be placed in the <Authentication>/<Mnemonic> field in the ConnectCIC header. ConnectCic for this interface has a maximum limit of 6 characters. ✓ <u>ORI</u> – The LEADS-provided ORI for a device (or for the site) should be placed in the <Authentication>/<ORI> field in the ConnectCIC header. ✓ <u>User Name</u> – The application assigned User Name should be placed in the <Authentication>/<UserName> field in the	

	ConnectCIC header, maximum 12 characters.	
3.	<u>Security Requirements.</u> LEADS requires vendor's employees who will be exposed to CJIS data to be fingerprinted for background checks at a sponsor site (i.e. first site in state). CommSys has already been fingerprinted for Illinois.	
4.	<u>Certification Requirements.</u> LEADS currently does not require vendors to certify their interface prior to installing at a site.	
5.	<u>Logon Requirements.</u> LEADS currently does not require vendors to support logon transactions.
