

Kansas (KS) KCJIS OFML

[Disclaimer Statement](#)

Transport:

TCP/IP Foxtalk

Routing and Configuration Information:

Save-byte routing

Mnemonic routing

- The KCJIS-assigned ORI for a device (or for the agency) should be placed in the <Authentication>/<ORI> field in the ConnectCIC header.
- The KCJIS-assigned mnemonic for a device should be placed in the <Authentication>/<Mnemonic> field in the ConnectCIC header.

Security Requirements:

No vendor requirements known at this time.

Logon Requirements:

Users are required to logon before using the interface, and logoff after their use is complete. These actions are supported by the LogonRequest and LogoffRequest transactions as listed below.

Required fields are UserName and Password

- The UserName is the KCJIS assigned User ID
- The Password is the Operator PIN + Security Token
 - The Operator PIN must be hidden when entered.
 - The Security Token should NOT be hidden.

Example: OperatorPin: ***** Security Token: 1234A5

Certification Requirements:

If an agency is looking to add an interface to the state central message switch at the Kansas Bureau of Investigation from their CAD/MDT/RMS system, the agency must follow the steps below to go through the testing process before being approved to go live.

1. Contact the KCJIS Security Officer at the Kansas Highway Patrol (KHP) to get the Interface approved. Forms can be found at <https://cjsaudit.khp.ks.gov/launchpad/cjsdocs/docs.cgi>.
2. The KCJIS Security Officer at the KHP will notify the requesting agency and the KBI Help Desk when they have approved the agency for the terminal mnemonics of the server and all

CAD/MDT/RMS workstations that will connect through the server. The approval will also include information on the level of access, the type of connection (VPN Secure Remote, Firewall to Firewall encryption, etc.).

3. The agency will then contact the KBI Help Desk within 30 days of the approval so that a ticket may be opened for the agency and the terminals created. The Help Desk technician will send the ticket to an NCTIII for follow-up.

4. The agency will fax the information for their connection on agency letterhead to the KBI Help Desk. This information will include the internal and external IP address the connection is being made from, all message keys that will be tested and need to be approved, and the users that will be performing the testing. Send this to the attention of an 'NCTIII'.

5. The agency will provide their vendor with the information needed to develop the interface to the central message switch, including the documentation in this packet and the specific message keys to be submitted.

6. The testing agency will then set a date and time with an NCTIII at the KBI Help Desk to connect to the certification switch.

7. After the connection has been made, the agency will test all of the requested message keys.

8. The agency will contact a KBI NCTIII to review the logs to ensure that logins, message key transactions, logouts, and protocol-specific transactions are formatted correctly.

9. If the requirements are met then the agency will be approved to move their connection to the KBI production message switch. If all of the requirements are not met, the agency will be notified what is working, and what is not working and needs to be fixed. The agency will then have the opportunity to take corrective action. Once they are satisfied that the issues have been fixed and tested, they will contact the NCTIII again to perform further review.
