

AZ\_AZDPS — Query Guide (build v3.12)

Find your entity, then pick the row for what you want to **search by**. Fill every field in **Required**; anything in **Optional** narrows the search but is not needed to run it.

2.

ACVR

(in-state)  
(out-of-state)  
Plate Year (2026)

Rows are numbered per query, in the order the system tries them. If what you typed fits more than one row, the **lowest-numbered** row wins — so the more you fill in, the more specific the search.

The **message key** — the state's own name for that transaction. It is what appears in a wire log, so quote it when asking about a specific search. **The same key can appear on more than one row**: one transaction often covers several search paths, and that is normal, not a duplicate.

Which path the search takes. Leaving **State** blank searches in-state; entering a state sends it out-of-state. Where a row says **(in-state or out-of-state)**, that one row does both — add a State only if the record is from another state.

A value in parentheses is **already filled in** on the form. Leave it alone unless you know it should be different.

*Only these paths run a search. Filling extra fields that are not listed for your row does not broaden the search — it can send you to a different row, or to none at all.*
